Description provided by Customer: PVC PIPE FOR WATER WELLS

SAMPLE PREPARED BY: CUSTOMER, TRANSPORT MADE BY COURIER  
Sample Condition on Receipt: 20°C

ANALYSIS DESCRIPTION	RESULT	U	REC. %	UNIT OF MEASURE	LQ	LD	METHOD	ANALYSES BEGINNING DATE / ENDING DATE
Determination of overall migration test in distilled water at 40°C for 24 h (D.M. 06-04-2004, n.174) - D.M. 174 del 06/04/2004 60	9,4	± 1,9		mg/kg	1		DM 06/04/2004 GU n 166 17/07/2004 All Ille Sezione 1	27/03/2023/ 19/04/2023
Specific migration of vinyl chloride monomer in distilled water	< LQ			mg/kg	0,010		* CVM 2016 Rev.6 - GC-MS-MS	27/03/2023/ 18/04/2023
Detection of coloring substances migration in distilled water - Limite (D.M. 21/03/1973 e smi): >95%	Optical transmission between 400 and 750 nm >97%						DM 21/03/1973 GU n° 104 20/04/73 All IV Sez 7 - UV-VIS	27/03/2023/ 19/04/2023

**Results compliance evaluation::**

On the basis of the tests carried out, the sample subjected to analysis, complies with the migration limits set by Ministerial Decree No 174 of 06/04/2004 , regulation on materials and objects that can be used in fixed collection facilities, treatment, supply and distribution of water intended for human consumption.

**Notes and method reference:**

The migration tests were carried out by immersion of specimens, with a surface ratio /volume of 0,7 cm<sup>2</sup>/cm<sup>3</sup> after washing in running water for 30 minutes and then rapid rinsing with distilled water.

The analytical value is expressed in mg/kg on the basis of the conventional surface ratio / volume of 6 dm<sup>2</sup> per kg of water.

< LQ: = lower than Quantification Limit.

U: the reported uncertainty is the expanded uncertainty calculated using a coverage factor equal to 2 which gives a reliability of approximately 95%. The measurement uncertainty data is not synonymous with a certain form of positivity but only with the performance of the method.

MICROBIOLOGICAL TESTS: for food and environmental samples, the extended measurement uncertainty was estimated according to ISO 19036:2019 Standard and is based on a standard uncertainty multiplied by a coverage factor of K = 2, providing a confidence level of approximately 95%. The combined standard uncertainty was assumed to be equal to the standard deviation of intra-laboratory reproducibility. The results of the microbiological tests are calculated according to the ISO 7218: 2007 / Amd 1: 2013 Standard.

If the results are reported as <4 (CFU/ml) or <40 (CFU/g), this means that the microorganisms are present in the sample but in amounts less than 4 CFU/ml or 40 CFU/g respectively. For microbiological analyses unless differently reported in the individual test methods, in case of analytical steps foreseen in non-activity days of the laboratory, provisions of the ISO 7218: 2007 / Amd.1 2013 Standard (points 11.2 and 10.2.5) or from specific test methods are applied. In the case of quantitative microbiological tests, these have been set up on a single plate according to ISO 7218:2007/Amd.1 2013 par. 10.2.2 unless otherwise expressly requested by current regulations. In the case of quantitative microbiological tests, these have been set up on a single plate in accordance with ISO 7218:2007/Amd.1 2013 par. 10.2.2 unless otherwise explicitly required by current regulations.

For waters, the measurement uncertainty corresponds to the confidence interval calculated according to ISO 8199: 2018 or to the expanded measurement uncertainty estimated according to ISO 29201: 2012. The results are issued in accordance with ISO 8199: 2018. When the number of colonies detected is <3, the result is expressed as "Microorganisms present in the analyzed volume (N ° colonies detected <3 CFU - reference ISO 8199: 2018, paragraph 9.1.8.4.1)".

LQ: Quantification Limit. It is the lowest analyte concentration which can be detected at an acceptable precision (repeatability) and accuracy, under well defined conditions. It should be noted that each result expressed as '<LQ' does not in any case indicate the absence of the parameter sought in the sample under examination.

LD: Detection Limit. It is the lowest analyte concentration which can be detected but not necessarily quantified, under well defined conditions.

Any fields not filled in the Test Report are to be considered not applicable.

Conformity evaluation: values not complying with laws, decrees, national and EU regulations or specifications supplied by the customer are evaluated case by case, also taking into consideration the uncertainty of measure for each single test and the regulations on rounding-off of values, and pointed out when considered as non conform.

Rec %: Recovery % "+" means that the recovery has been applied to the result. The numeric results between brackets (..) after the expression <LQ are purely indicative of traces that cannot be exactly quantified. The test report shows the community MRLs contemplated by Reg 396/2005 and subsequent amendments. The technical staff is available to verify the possibility of use the active substance in Italy on the crop.

In the case of sampling carried out by Neotron, the laboratory applies the Internal Operating Procedure code: NEOT-DIR/ 006/53.

The laboratory disclaims any responsibility for the information provided by the client reported in this Report which may influence the validity of the results.

In the case of quantitative microbiological tests, these have been set up on a single plate in accordance with ISO 7218:2007/Amd.1 2013 par. 10.2.2 unless otherwise explicitly

**Results compliance evaluation:**

For waters, the measurement uncertainty corresponds to the confidence interval calculated according to ISO 8190: 2018 or to the expanded measurement uncertainty calculated according to ISO 8190: 2018. When the number of colonies detected is <3, the result is expressed as "not detected" according to ISO 8190: 2018, paragraph 9.1.3.4.17.

LQ: Quantification Limit. It is the lowest analyte concentration which can be detected at an acceptable precision (repeatability) and accuracy under well defined conditions. It should be noted that each result expressed as "LQ" does not in any way indicate the absence of the parameter sought in the sample under examination.

LD: Detection Limit. It is the lowest analyte concentration which can be detected under well defined conditions.

Any fields not listed in this report are not applicable.

On the basis of the tests carried out, the sample subjected to analysis, complies with the migration limits set by Ministerial Decree No 174 of 06/04/2004, regulation on materials and objects that can be used in fixed collection facilities, treatment, supply and distribution of water intended for human consumption.
